

Kraket Sustainability Pledge

These are the Sustain-a-Goals Kraket will be working on in the upcoming year:

- Kraket has the intention to form a sustainability committee every year;
 - The details of this committee are not fixed. The committee should, however, focus on creating more awareness among the Kraket members.
 - Kraket has the intention of organizing at least one career event every year with companies that explicitly value sustainability in their decisionmaking or day-to-day actions. This could be a Sustain-a-Business Day or inhouseday(s).
 - Next year the sustainability committee has the task to council the Kraket board in their decision regarding sustainability.
- When Kraket organizes activities at the VU or in parks, the board and committees strive to use reusable cups instead of single use cups. In order to do so, the treasurer will, in collaboration with the sustainability committee, buy reusable cups that could be used for drinks at events.
- Kraket will consider switching to a (more) sustainable bank.
- When doing offline promotion, it is always considered if it is useful to print.
- When decoration is needed for an event, the Kraket board/committees first think about whether there is an option to reuse decoration or borrow decoration instead of buying. Only if this is not possible and the decoration really adds value to the event, the decoration is bought. When decoration is bought, it will be stored in the archive for reuse.
- To encourage the reuse of products. Kraket is trying to start the “econometribliotheek” this year, which is a swapping closet for students.
- Kraket will take into account the degree of sustainability, before collaborating with a company.
- Kraket should always offer at least one sustainable food option.
- Kraket will provide one sweater to rule them all. High quality materials that can be reused and reprinted. Kraket considers to pay for the reprinting of the sweaters each year.
- Kraket will take the sustainability of a goodie/merch into account before ordering.

From now on, sustainability will be a point at the agenda of the general assembly. During the general assembly, an update will be given on how it is going with the pledge. The board of Kraket is allowed to change the pledge, in collaboration with the sustainability committee. By updating the pledge, new challenges regarding sustainability can be taken into account and so our association could keep striving for a more sustainable future.

By signing this pledge, Kraket shows the desire to contribute to a more sustainable future.
